NO TRUST MACHINERY.

Our Mowers, Reapers, Binders, Harrows, Corn Binders, Plows, etc., are made outside of the trust.

NON-WARRANTY.—F. H. Ebeling gives no Warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds, bulbs or plants he sends out, and he will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

1868—THIRTY-FIFTH YEAR—1903.

FOR THIRTY-FIVE YEARS this house has been located in the same block, having been established in 1868 by Mr. A. D. Perry. We are pleased to announce that never before have we been better able to meet the requirements of our trade than at the present time. **This house is the only strictly seed-house in Central New York.** Importing the finest and choicest varieties of **Flower and Garden Seeds**—as well as dealing in all the more common sorts of field and garden seeds, implements, drain tile, hardware, etc., and which this catalogue will more fully explain.

We can supply everything for the **Farm, Garden, Lawn, Greenhouse, Dairy and Poultry Yard**, and take this opportunity of thanking our many friends for past favors and generous patronage.

Establirt 35 Jahre.

Wir übergeben dem geehrten Publikum hiermit unseren 33ten jährlichen Catalog für das Jahr 1903. Derselbe enthält eine vollkommene Liste auserlesenen Sorten frischer Garten-, Feld- und Blumen-Saamen, sowie von allen Artikeln, welche für den Landbau, Garten, Allee, Treibhaus, Pflanzhof u. s. w. nöthig sind. Dies ist das einzige wirkliche Saamen-Geschäft in Central New York. Wir importiren die besten und seltensten Samenarten vom Auslande, besonders für unser Geschäft auserlesen. Alles nähere besorgt dieser Catalog. Herr Ebeling, der Eigentümer, macht es sich zur besonderen Aufgabe, alle seine werthen deutschen Kunden in ihrer Muttersprache zu bedienen, und ist es sein stetes Bestreben durch freundliche u. zuvorkommende Bedienung ihre Kundenschaft und Wohlwollen zu erwerben und zu erhalten.

Achtungsvoll zeichnet **F. H. Ebeling,**
217 Warrenstraße, Syracuse, N. Y., (dem neuen Postamt gegenüber.)

TRUE ERFURT CAULIFLOWER.

Cauliflower Seed.

This we have imported annually from the same growers for many years. It will produce a greater number of perfect heads than any other strains of cauliflower we ever saw. Of all the varieties that have been tried in this market our strains of Erfurt and Snowball have given the best satisfaction. We have our usual stock and we can assure you the quality is always the same and no cheap seed is offered you in its place. There is no better Cauliflower Seed in the market, even if you pay fancy prices. Our price is \$3.00 per ounce.

CAULIFLOWER, Blumen-Kohl.

✓ Ebeling's Snowball, extra small leaf, fine large head	\$3 00
✓ Ebeling's Dwarf, Erfurt, first quality, true	3 00
✓ Half Early Paris, large heads	75

The leading Cauliflower Growers in this section, have used our strains for years and say it is without equal. A sure header, a fine yielder and a money maker.

See last page.

A Field of our White Plume and Paris Golden Celery.

Sutton's A 1 CELERY.

Very dwarf and compact, of superb flavor and deep pink color, but occasionally sporting to white. Although our A 1 is distinctly an early Celery, it remains solid and excellent in quality until quite late in the season. Apart from its superiority for table use, it is indispensable for the exhibition stage before other varieties are ready. Oz. 30 cts. Lb. \$4.00

Sutton's Solid White Celery.

Very sweet large and solid, we recommend this as the best White Celery for the main crop, far superior to the White Plume in flavor, size and solidity. Oz. 30 cts. Lb. \$4.00

WHITE PLUME CELERY.

CELERY, *Sellerie*.

	Per oz.	Per lb.

GRAND RAPIDS LETTUCE.

Yellow Seed Butter—Y. S. Cabbage Butter head, medium large, medium green, leaves crumpled and rather thick. Is similar or same as silver Ball.

Wonderful—W. S. Curled or crisp, heading, dark green, heads somewhat conical.

Giant White Cos—Large size, medium light green, is quite tall, forms a good head.

Deacon Head—Cabbage butter head, medium size, medium green, leaves thick. Does not form a decided head but a well folded one, which is very oily and golden yellow inside.

Denver Market—W. S. Cabbage butter head, medium small size, medium green. One of the old standard varieties, and in our experience have found it identical with White Seed Tennistall.

Denver Market—W. S. Curled or Crisp heading, medium size, light green, leaves very curly and crumpled, savoyed and coarsely fringed.

Big Boston—W. S. Cabbage butter head, medium green, leaves smooth and rather glossy, edges straight. Top of head tinged with brown.

New York—W. S. Curled or Crisp as Icehead, dark green heads somewhat conical.

Black Seed Tennisball—Standard sort and used exclusively in the east for hot bed culture but not for green-house culture. Is similar to Salamander which see for description.

Also hundreds of others who have dealt with us for many years.

MR. F. H. EBELING,

SIR:—This season of the year produces with us an important question, which we are much pleased to be able to decide so quickly. That is where shall we purchase our seeds? Which you are aware, after so many years doing business with us, means considerable. We have no hesitation in saying we shall cheerfully send you another year's trade, feeling confident you will take care of our wants in your line, and protect us all you are able in good fresh goods, at reasonable prices as heretofore. Wishing you a happy and prosperous New Year, we remain,

Yours respectfully,

DAY & BEARD.

WATERLOO, N. Y., January 1, 1903.

✓ Canada Field		

✓ Wrinkled varieties marked thus *

The Admiral. Vines vigorous, about four feet high, comparatively slender, little branched. Pods usually borne in pairs and in great abundance; they are about two and one-half inches long, thick, curved, bright green, crowded with six to nine peas of the very best quality and color. We know of no pea which remains palatable longer after it becomes large enough to use. This variety ripens with Telephone or a little later. Owing to its great vigor, productiveness, fine color, quality and suitable size of the green peas, it is admirably adapted for canners' use.

Bei uns wird Deutsch gesprochen.

NEW THINGS FOR 1903.

NEW CUCUMBER, THE "CUMBERLAND."

This handsome cucumber is the result of eight years' careful breeding by one of the leading growers in the United States.

It is a cross of Parisian Pickle and Peerless White Spine, the successful combination of these two varieties making an ideal variety both for table use and for pickling. The vines are of strong, vigorous growth and very productive. The fruits, which are of handsome appearance, grow to a desirable size, very straight, firm, solid and crisp. Color is a rich pea-green, and flavor very fine, either when eaten sliced in the raw state, or after they have been pickled. Pkt. 10c; oz. 30c; $\frac{1}{4}$ lb. 80c.

EBELING'S NEW BLOOD TURNIP BEET.

Description of Ebeling's New Blood Turnip Beet you ordered from us this season: It is an early variety; the root is nearly round and is scarcely one-half in the earth. The skin is of a very dark red color and the flesh bright red. The leaf is long green foliage, spotted and striped in brown red. The root is about as long as that of the Detroit Dark Red Beet. Price 75c per lb; oz. 10c.

Yours truly,

ANDREW LEROY & Co., Successors.

EBELING'S CRIMSON GIANT FORCING TURNIP RADISH.

This new Radish which I have the pleasure to offer to my customers for the season 1903 is an entirely new type, and differs radically from all the varieties hitherto in cultivation in so far as it grows more than double the size of those of other forcing varieties, without getting pithy or hollow.

Such sorts as Non Plus Ultra or Scarlet Globe measure 2 to 3 inches in circumference and weighs $\frac{1}{4}$ oz; once passed this size they are unfit for use. The new Giant Radish, however, develops roots of 6 to 7 inches in circumference and over an ounce in weight, their pure white flesh remaining firm and crisp and of the mildest flavour, but notwithstanding the extraordinary size and weight of its bulbs it is second to none as a forcing variety.

The Crimson Giant Forcing Radish varies a little as to form, some of the roots being round and others inclining to oval, but its beautiful deep crimson color is quite constant. Packets only this season, 25 cents per packet.

THE DELICIOUS SQUASH.

The Delicious is the product of years in careful selection, crossing and isolating. About every known variety enters into its composition. We have been for years engaged in selecting by the test of cooking the richest among the class bearing a green color, and these we crossed with the Hubbard. From the resulting cross we have been selecting each

season for our seed stock the thickest meated specimens and the very best for quality. The result is a squash that by universal agreement surpasses the Hubbard and Marblehead. Its color is almost uniformly of a green shade, with occasionally a blue specimen, it being just about as pure in this respect as was the original Hubbard, which weighed between five and ten pounds. In thickness of flesh it surprises nearly every variety the color being a dark orange. For table use no squash compares with it in its remarkable combination of fineness and compactness of grain, dryness, sweetness and exceeding richness of flavor. It is a fall and winter squash, being excellent at all seasons, but like the old Hubbard, though at any time excellent, does not acquire its best quality until winter. When half grown it will be found to surpass in quality most varieties when fully ripe. Price per packet 20c.

EBELING'S "WONDERFUL" LETTUCE.

The large, white heads resemble cabbage in their solidity, and frequently weigh two and three pounds each. The quality is superb, being crisp, rich and tender. It withstands the heat well, making a fine variety for all seasons. Ounce 25 cents.

ONONDAGA MUSK MELON.

This new early, large, fine oblong, netted, green fleshed Melon was originated in this city and has become a great favorite with the dealers, and much sought for as a table melon. A great yielder, very hardy, firm fleshed, attractive in appearance, a ready seller—one of the best introductions of recent years. Price, ounce 25 cents; pound \$2 00.

WAVERLY OATS.

The heads are of the cluster type, long and well filled. The straw is usually of a bright, amber color and strong, erect growing, and in ordinary seasons grows somewhat taller than many other varieties of oats. The grain as will be seen from the sample is exceptionally heavy, with large meaty kernels, and the spikelets usually contain three grains instead of one as in most other varieties. Price \$1.25 per bushel.

JAPANESE BARNYARD MILLET.

This new Millet is of Prof. Brooks' introduction. It has been sown all over the United States and has given astonishing results. (*Panicum Crus Galli*) So rapidly has it advanced in popular favor that the demand far exceeds the supply. On our New York seed farm it has reached a height of 6 to 7 feet and a yield of 6 tons or more of cured hay per acre. In Massachusetts it has yielded 21 tons of green fodder per acre. As a soiling crop it can be cut three or four times, if not allowed to head. The stalk, though much larger, is softer and bears double the amount of leaves of the other varieties.

KAFFIR CORN.

Is the only non-saccharine Sorghum adapted to northern growth. It is not equal to the saccharine varieties for forage but produces a heavier crop of seed which is valuable as food for poultry and cattle. It thrives in regions of the western states which are too arid for the certain production of other grains. Culture same as for the saccharine varieties. \$1.75 per bushel.

SOJA OR SOY BEAN

This Bean as yet so little known in the eastern states is of great value as a forage plant, a soil renovator and food producer. It will grow wherever white beans flourish and will yield within 90 days from planting, 8 to 12 tons of green forage more nutritious than clover. Will store in the soil a considerable amount of nitrogen and if allowed to mature will produce from 30 to 60 bushels of beans, richer in protein and having a higher feeding value than any other food grown, for cattle, sheep or swine. The beans should be ground before feeding. Seed should be planted after the ground is thoroughly warm. Drill 28 to 30 inches between rows. 10 to 15 quarts per acre, leaving plants 4 to 6 inches apart in the rows. There is a large and increasing demand for northern grown seed at good prices. Why not save some?

SORGHUM.

Early Amber is the earliest and hardest Saccharine Sorghum and should be sown after the season for corn planting when the ground has become thoroughly warmed. It will thrive on any soil that will produce corn. Prepare the ground as for corn and before sowing the seed, harrow two or three times at intervals of 5 to 7 days to kill weeds. If to be cut for forage, drill the seeds in rows 2½ to 3 feet apart, cover 1½ to 2 inches deep, roll the ground after planting and harrow lightly to conserve moisture. Cultivate as you would corn. If for hay or pasture sow broadcast 1 to 1½ bushel of seed per acre or drill 10 to 20 pounds with a grain drill.

DWARF

ESSEX RAPE.

The true Dwarf Essex Rape is valuable as a fattening food for pasturing sheep in autumn. It is particularly adapted as a "catch crop," for it grows best late in autumn. In the northern states it can be sown at any time from May until the end of August, but in the southern states it should not be sown until September or October for winter pasture. Its fat ening properties are said to be twice as good as clover. Sow ten or twelve pounds per acre in drills fifteen inches apart. When sheep are feeding on Rape they should at all times have access to salt. Per pound 8 cents; 100 pounds \$6.50.

If in doubt what to grow on your land sow clover seed. You can't have too much of it and feed it out on the farm.

Kill the weeds by two or three harrowings before sowing grass seeds or grain.

The man who makes two weeds grow where but one grew before by sowing the seed on his well prepared soil is a fool. *Buy clean seed.*

Weed seed is a dear purchase at any price. The home supply is more than enough.

BARLEY, SPRING RYE, SPRING WHEAT AND SEED OATS.

We offer choice well cleaned, true to name, varieties of SEED at reasonable prices.

BEARDLESS BARLEY—A fine yielder. Strong growth of Straw. A barley without the objectionable beards, giving it a superior feeding value. These features combine to make it the best and most profitable Barley known. Beardless Barley was introduced by us several years ago, and has proved to be very popular. Price \$1.00.

BUCKWHEAT—\$1.00 per bushel.

SPRING RYE—We offer a fine crop of Spring Rye at \$1.40 per bushel.

SPRING WHEAT—We can supply SPRING WHEAT at market prices.

WHITE SEED OATS—We offer choice well cleaned, true to name, varieties of Seed Oats at reasonable prices.

COW PEAS—\$2.75 per bushel.

DWARF ESSEX RAPE—\$6.50 per 100 lbs.

FIELD CORN—White or Yellow.

HURON DENT CORN.

GOLDEN MILLET—\$2.00 per bushel.

KAFFIR CORN—\$1.25 per bushel.

SPELTZ—\$1.00 per bushel.

ALFALFA—Market price.

SOY BEANS.

JAPANESE MILLET—\$1.50 per bushel.

AMBER CANE.

WHITE AND YELLOW FIELD CORN.

We have a fine stock of eight and twelve rowed State Corn, which we offer at reasonable prices.

HURON DENT CORN.

Ripens as early as common field corn. Size of ear between the leaming or the ordinary eight-row sort. Ripens as early and is the best of the Dent varieties, Something that is bound to take the place of the common field sorts with the advantage of its being a much larger yielder. We have a fine stock. Price \$1.25 per bushel.

ALFALFA.

This valuable forage plant should have a place on every farm where the soil conditions do not prohibit its growth. It can be grown on any fairly well drained ground, a limestone soil being most desirable, and will send its tap root down through permeable soil until it strikes water, depths of 60 feet being reached. While a thin soil above rock has been thought to prevent its successful growth, in our southern states it flourishes on strong lime soils even when the rotten limestone rock comes within a few inches of the surface. In New York State it is grown largely in Onondaga County. It is counted the most valuable forage crop at the State Experiment Station at Geneva. Where the soil in a heavy clay loam, and throughout the western part of the state there are many well established fields in situations varying from river bottom lands to hill tops.

The FIRST essential in growing Alfalfa is clean soil, the seedling is slender and easily smothered by weeds.

SECOND, sow fresh American grown seed 30 pounds to the acre. The seed may be sown broadcast or drilled in. Seeding is generally done in the spring and early summer.

THIRD, cut when just commencing to bloom whether the plant be large or small if allowed to form seed the growth of the plant ceases. Three cuttings may be made during the season in this latitude after the plant becomes established.

The yield of hay is from four tons to the acre upward, depending upon the fertility of the soil. The hay is palatable and nutritious, and is composed almost wholly of muscle forming elements and should be fed with corn meal for fattening purposes. Experiment Stations place the feeding value of Alfalfa hay at \$20.00 per ton as against Timothy at \$12.

SPELTZ.

This has proven a great success in this neighborhood. Frank Matty and J. C. Surbeck of this city, and J. P. Tuck of Chittenango, N. Y., can be referred to by any who are in doubt. It is neither wheat, rye nor barley, and yet it appears to be a combination of these. It is more like wheat than any others mentioned. All kinds of animals seem to thrive on it. Yields 80 bushels of richer food than corn, besides giving as much as four tons of good fodder per acre. As a green grass hay food it often gives 100 leafy stalks from one seed, which shows its heavy stooling properties. The heads are somewhat similar to two-rowed barley, the spikelets being separated from each other in such a manner that the crop is not easily injured by the weather. The culture of Speltz is same as for wheat or oats, sow 50 to 60 pounds to the acre. In the green state it makes an excellent pasture. Cut when the grain is past the middle stages of milk, when it will make splendid grain and lots of straw hay of excellent quality. Thrash like wheat, but not so closely. The hull and kernel can then be fed or first ground. Price \$1.00 per bushel.

COW PEAS.

The principal varieties grown in the northern states are the black and whippoorwill, a brown striped pea.

Sow after the season for corn planting when the ground is thoroughly warmed. Most of the failures with this crop have resulted from sowing too early, the seed either rotting or the plants making but a feeble start from which they never fully recover and often being choked out by weeds.

The ground should be free from weeds and to make it so, should be harrowed two or three times at intervals of five to seven days before Peas are planted.

Sow 1 to 1½ bushels per acre, if broadcast, and if drill d, 20 to 30 lbs. Cover ½ to 2 inches deep.

Drilling 30 inches apart and cultivating between the rows is the best method of culture. When the plants begin to run they should be allowed to cover the ground.

May be sown with oats for forage, one-third oats, two-thirds peas broadcast.

As far north as Michigan, Cow Peas have made a vine growth of 8 feet and root growth of 5 to 6 feet, and have matured over 30 bushels of seed per acre.

Sown after early potatoes are dug, the Peas will make feed in 8 weeks. Will keep down the weeds and leave the land in splendid condition for any succeeding crop.

This plant makes one of the best quick growing cover crops to plow under for enriching the soil.

MUSHROOM SPAWN.

CAMPIGNON, FRENCH. Culture—Mushrooms may be grown in cellars, under benches of greenhouses or in sheds, wherever the temperature of 50 degrees can be kept up throughout the winter. The beds should be made from November to February, according to the time the Mushrooms are wanted, and it requires about two months for them to begin bearing. Secure fresh horse dung, free from straw and litter, and mix with it an equal bulk of loam from an old pasture. Keep this

**MUSHROOM BED.**

As far north as Michigan, Cow Peas have made a vine growth of 8 feet and root growth of 5 to 6 feet, and have matured over 30 bushels of seed per acre. Sown after early potatoes are dug, the Peas will make feed in 8 weeks. Will keep down the weeds and leave the land in splendid condition for any succeeding crop. This plant makes one of the best quick growing cover crops to plow under for enriching the soil.

Southern**Golden****Millet.**

The true Southern Golden is the only Millet that worth sowing—it yields immensely and grows quickly into a big fodder. We have a fine stock of the True Golden Millet, which is worth ten times as much as the “Common.”

This will grow a crop six feet high on good soil.

Golden Millet,
\$2.00 per bushel

Common Millet,
\$1.20 per bushel

Also offer fine stock Hungarian Millet.

SUPPLEMENTS TO FLOWER SEED LIST.

Flowers of Easy Cultivation that all Lovers of Flowers can and Ought to Grow.

ASTERS.

For early flowering sow inside in April or March, in shallow pans or boxes, using a light soil. Cover seed very lightly; transplant seedlings when large enough to handle; plant in permanent beds about June 1st; for late flowering sow in open ground as soon as weather permits.

Our Asters are Grown for Us by Specialists from the Finest Strains in the World and are Unrivalled.

AMERICAN BRANCHING. (Simple's or Vick's Branching.) A free growing Aster of robust, erect habit producing large, feathery blossoms, resembling Japanese Chrysanthemums; one of the finest for cutting. Height three feet.

	Oz.	½ oz.	Pkt.		Oz.	½ oz.	Pkt.
Finest Mixed	\$3.00,	.50,	.10	Light Blue	\$3.50,	.60,	.10
Crimson	3.50,	.50,	.10	Rose-Pink	3.50,	.60,	.10
Dark Blue	3.50,	.50,	.10	White	3.50,	.60,	.10

COMET—Colors various, with long wavy petals, full flower. 10c.

SNOWBALL—Pure white, pompon shape flower, about 15 inches high. 20c per pkt.

HARLEQUIN—Spotted and striped double mixed. 10c per pkt.

MIGNON—Pure White, small pompon flowers. 10c per pkt.

VICTORIA—Mixed color, tall, full flower, pyramidal shape. 10 cts.

BALL OR JEWEL—Symmetrically incurved, the bloom a perfect ball. 25cts. per pkt.

BRANCHING—Vick's white, very fine. 10cts per pkt.

For all other varieties see General Flower List.

BALSAM.

Beautiful and easily grown Half Hardy Annuals. Sow in open ground in May; the soil should be light and open; height 1 to 2 feet

DOUBLE WHITEoz.	\$2.00,	pkt. 10c	DOUBLE ROSEoz.	\$1.50	pkt. 10c
" PINK"	1.50,	pkt. 10c	" RED"	1.50	pkt. 10c

CALENDULA (MARIGOLD.)

Hardy free flowering Annuals with large double flowers in splendid variety of colors; grows well in dry situation; height, 1 foot. Sow outside in May.

MIXED, all colors	oz. 50cts.	Pkt. 5cts
--------------------------------	------------	-----------

CALLIOPSIS OR COREOPSIS ANNUAL VARIETIES.

Charming hardy Annuals, blooming early and lasting in flower till frost. Very useful for cutting.

MIXED VARIETIES in Rich and Brilliant Colors	Pkt 10cts
---	-----------

CANDYTUFT (IBERIS.)

Very showy, hardy Annuals, growing about 1 foot in height; grows well in any ordinary soil. Sow outside in May.

MIXED COLORS in great variety	oz. 30cts.	Pkt. 5cts
--	------------	-----------

CARNATION MARGUERITE.

Half hardy perennials if sown inside in spring and transplanted to the open garden in May, will flower in July and continue till frost, when with a light covering of rough straw or leaves they can be carried over winter and be much better the following year; or they may be potted up in the fall and flowered in the house during winter. The flowers in size, fragrance and variety of colors are equal to the best greenhouse varieties. Sow inside in March or April in shallow pans or boxes; transplant in open ground in May, or sow seed outside as soon as danger of frost is over.

MIXED VARIETIES, or separate colors (white, pink, red, rose yellow, striped,)	oz. \$2.00,	Pkt. 10 cts
--	-------------	-------------

CASTOR BEAN (RICINUS.)

Tender Annuals of rapid and gigantic growth, producing enormous dark green or bronze colored palmate leaves, excellent for massive foliage effect on lawns or backgrounds; can be started in April in the house and transplanted to the open garden about the first of June where they will attain a height of from 6 to 10 feet in a few weeks. 25c oz., 5c pkt.

CHRYSANTHEMUMS' ANNUAL VARIETIES.

Hardy Annuals of easy cultivation and blooming early in the summer; grows about 2 feet high; splendid variety of colors.

SINGLE, MIXEDoz. 40c.	Pkt. 5c.	DOUBLE, MIXEDoz. 40c.	Pkt. 5c
------------------------------------	----------	------------------------------------	---------

SUPPLEMENT TO FLOWER SEED LIST.

COSMOS EARLY FLOWERING.

One of the most beautiful flowers in cultivation; if sown in May in the open ground will bloom about the middle of July: the colors include pure white shades of lilac, rose and crimson.

MIXED SHADES Pkt. 10cts

DAHLIA, SINGLE.

These popular flowers can be raised from seed and flowered the same season, and nothing gives more satisfaction than a good bed of Single Dahlias, being far superior to the double varieties for cutting purposes; sow seed inside in April: plant in the open ground about the first of June. A cool, rich soil suits Dahlias.

MIXED VARIETIES Pkt. 10cts.

MIGNONETTE.

This delightfully fragrant plant should be grown by every one who has room for a window box. Its cultivation is the easiest possible. The seeds should be sown early outside, and the young plants thinned sufficiently to allow them to branch. Water freely in dry weather.

MACHET, one of the best oz., 60cts. Pkt., 10cts

NASTURTIUMS.

No collection of flowers should be without Nasturtiums, they grow so forcibly and afford such a variety of rich bright colors. As a cut flower there is nothing more effective, sweet scented and pleasing in every way.

TALL VARIETIES MIXED . . oz. 10cts. Pkt. 5cts | DWARF VARIETIES MIXED—oz 15c Pkt 5c

OUR MIXTURE OF NASTURTIUMS IS THE FINEST IN THE COUNTRY.

NASTURTIUM DWARF, Aurora, very fine . .	EACH 5c PKT.	NASTURTIUM DWARF, Empress of India, . .	EACH 5c PKT.

PETUNIA.

The Petunia, owing to its good growing qualities and its dazzling colors, is a favorite with all growers of flowers who appreciate brilliant effects; for window boxes and mass beds nothing is more effective. Annuals growing from 12 to 15 inches high.

DOUBLE VARIETIES MIXED . . Pkt., 50cts. | SINGLE Pkt., 10cts

SALVIA (FLOWERING SAGE.)

Splendens, one of our most useful and gorgeous bedding plants, with long spikes of brilliant scarlet flowers, blooming continuously from mid-summer till frost; about 3 feet high. Sow inside in April and transplant outside when danger of frost is over, or sow outside in May. \$3.00 oz. 10cts. pkt.

SWEET PEAS.

The improvement in this flower during the last few years is truly wonderful. The beauty and variety obtained through the work of the hybridizers is a revelation as to what can be done for the improvement of flowers by hybridizing. The delicate shades to be had in the new Sweet Peas cannot be surpassed by even the rose. To get the Sweet Pea in perfection it should be sown early in rich rather moist soil. Dig a trench about eight inches deep, fill in two inches of well rotted manure, then two inches of rich soil in which the Sweet Peas should be sown cover with one inch of soil and as the plants grow keep filling till trench is level. In dry weather cover roots with litter of any kind to keep moist and cool and you will be well repaid.

LEADING VARIETIES.

Oederatus "Sweet Peas"—	5 Cents Per Package.	Grey Friar—A light marble mauve	5 Cents Per Package.
Adonis—Beautiful deep rose with wings almost carmine		Imperial Blue—Purple blue	
Apple Blossom—Resembles the flower of Apple Blossoms		Indigo King—Dark maroon-purple

		" " Waverly—Rosy claret	
		" " Apple Blossom	
		" " Cap't of Blues—Bright purple	

For Additional Flower Seed List see Pages 20, 21, 22.

FLOWER SEEDS.

KEY TO CULTURE.

A Sow for succession from April to June for summer and autumn blooming. Prepare the ground thoroughly by digging, adding a good supply of leaf mould or well rotted manure, making the surface fine and smooth.

B Sow in gentle heat, in a well drained pot or pan of light soil. Sow thinly and cover lightly with a fine sandy soil. Shade from bright sunshine, and water when necessary through a fine rose watering pot. Transplant to open ground when all danger from frost is over. The seed may also be sown in a cold frame in April, or open border in the latter part of May, but will not flower so early. Transplant or thin out before the plant gets too large.

C Sow from April to June, or in August, in a well prepared bed of light soil, covering the seed lightly. Keep clear of weeds, and thin out the plants if too thick, sufficiently early to allow them to develop their growth.

D Sow in Spring in a well drained pot or well prepared hot bed of light, peaty or sandy soil. Place in a moderately warm temperature. Shade from bright sunshine and keep moist, transplant when ground is in proper condition, or in open ground after May 10th for late flowers.

E Sow in open border in April or May, and thin out or transplant, giving each plant plenty of room.

F Sow at any time in a pot prepared as follows : Let the pot be one-third full of drainage or broken charcoal; cover the rough siftings of mould, and the surface with very fine soil, half of which should be composed of fine, sharp sand; water with fine sprinkler; scatter the seeds thickly over the surface, cover very lightly; keep from direct rays of the sun. As soon as the plant shows the third leaf, transplant into seed pans, three-fourths of an inch apart, giving a little air to strengthen them. When the plants begin to touch each other they should be transplanted singly into small pots and keep them in a cool, airy part of the green house near the glass. Re-pot them when necessary.

The following portion of our catalogue, devoted to Flower Seeds, we have arranged both alphabetically and in columns, to enable any one to easily refer to the price and description of any variety desired.

NAME.	Hardiness and Duration.	Height Feet.	Color of Flower.	Culture.	Per Pkt.	GENERAL OBSERVATIONS.
Aster, Truffaut's La Superbe.....	hA	2	pure wht.	D	10	Aster. No lover of these flowers can find anything so easily cultivated that would afford such genuine pleasure and satisfaction. The New Washington varieties are extremely beautiful, attaining a very large size averaging 4½ inches in diameter, and in delicacy of tints are unequalled. Aster seed should be sown early in the Spring in a hot-bed or window box and transplanted out-doors when the weather is warm, about 12 inches apart—the taller varieties a little farther apart and the dwarf varieties a little nearer together.

WHEELBARROW SEEDERS.

WITH RUBBER, WIRE OR TWINE DISTRIBUTORS.

WITH WOODEN OR IRON FRAME.

THEY CAN BE WORKED BY ANYONE WHO CAN RUN A WHEELBARROW.

PRICE, \$6.50 TO \$8.00 EACH.

THE LITTLE GIANT SEED SOWER.

This is the cheapest Crank Seeder on the market, and equal to the best for quality of work it does and durability. Don't pay \$5.00 for a seeder when you can get its equal for less money.

Will sow Wheat, Rye, Oats, Rice, Flax, Millet, Turnip [Seed, Clover Seed, Grass Seed, including Light Grasses; in fact any kind of Seed broadcast. Also Plaster, Fertilizer, Salt, Ashes, etc.

They save one-third seed and two-thirds labor.

CRANK SEEDERS,	-	-	-	-	\$2.00
FIDDLE SEEDERS,	-	-	-	-	1.50

EMPIRE COMBINED CORN DRILL, \$15

Only Corn Drill made that has a *positive force feed fertilizer attachment*. The discharge of corn and fertilizer can be seen at all times by the operator. The weight is adjusted so as to equalize it and

place a large share on the front wheel, relieving the blades and making the weight on the blades nearly the same when the box is full as when empty.

It has independent levers to throw both corn and fertilizer attachments in and out of gear, and will drill from 23 to 120 quarts of fertilizer per acre, and drop corn from 8 to 30 inches apart.

Furnished with or without fertilizer attachment, and with wheel or blade covers, as desired.

It has a brush cut-off which guarantees no breaking of grain.

Two plates are furnished with this corn drill, one for large and one for small corn.

LAWN SEEDS.

The *best Lawns of Syracuse* show what we are doing to promote this good work in our midst. For years we have studied the nature of grasses, their adaptation to soils, height, color, etc., with this object in view. We use in our mixture only grasses that harmonize in color and size, using both early and late varieties, that our lawns may remain green and beautiful all through the season. We are sure there is no better mixture for lawns than ours. Our *Lawn Seed is Strictly Pure*. We examine every variety under a glass before we mix them, that our lawn seed may be free from fowl weeds. We use only fibrous rooted perennial grasses that will stand the drouth and close cutting without injury. We select grasses that harmonize in size and color in order to produce a fine velvety appearance and form a thick covering on the ground.

Per lb., 25c.; per 100 lbs., \$18.00

THE IRON AGE

FARM AND GARDEN IMPLEMENTS.

The "Iron Age" Catalogue for 1903

Will be sent Free upon Application.

NO. 6. Iron Age Combination Double Wheel Hoe, Hill and Drill Seeder. Price \$11.00

NO. 7. Iron Age As a Seeder Only.
Price - - \$8 00

This tool is without question the most practical and complete combined garden implement ever offered the public, the ease and simplicity of adjustment, the lightness combined with great strength, the accuracy by which it drills or hills the seed, and the small amount of power required to operate it, are the most important features.

The wheel is made of steel, 16 inches high; the frame of pipe, coupled to malleable castings. In each form, whether a Seed Drill, a Double Wheel Hoe or a Single Wheel Hoe, it is equal to any tool or tools made especially for one purpose.

It places the seed in hills or drills, it plows, it rakes, it opens furrows, it covers, it hills, it hoes, it cultivates.

NO. 1. Iron Age Double Wheel Hoe. Price, \$6 50

(The Drill Form of the Tool Shown Above.)

NO 3. Iron Age (Side Hoes Only) Price \$3 75

At a glance one can see the great usefulness of this tool. The garden or farm is incomplete without at least one of them.

In cultivating onions, beets, turnips, radishes, etc., it is invaluable, saves hours of hard labor and does the work better than several men could do it in the same time. One great advantage which this Double Wheel Hoe possesses is that it can be made into a practical Single Wheel Hoe in a moments time.

An axle is sent with every Double Hoe for this purpose. The wheels are 16 inches high, enabling the Wheel Hoe to run easy and without yielding to the inequalities of the soil, as a low wheel will do. The frame being made of tubing coupled to malleable castings gives great strength, together with lightness. All the tools shown in the cut go with the machine for the price, \$6.50

A Seed Drill attachment for sowing in rows only (No. 4) or for sowing both in rows and hills (No. 6,) \$3.50 and \$4.50 respectively.

When applied the tool is identical with that of the Iron Age No. 4 or 6. Combined tools, depending upon which seed attachment is applied.

Showing the Double Wheel Hoe Set Up as a Single Wheel

The Weeder Attachment, Price, per. pair \$1.00

No. 15 Iron Age Combined Single Wheel Hoe, Hill and Drill Seeder. Price \$10.00

No. 16 (as a Seeder Only) \$7.50

In combining these tools not a single advantage of a separate Single Wheel, Hoe or Seed Drill is lost. As each they are in themselves complete. Changed from one form to another almost instantly, completely filling every desire both as to method of handling seed and soil.

It places the seed in hills or drills, it plows, it rakes, it opens furrows, it covers, it hills, it hoes, it cultivates.

The wheel is made of steel 16 in. high; the frame of pipe, coupled to malleable castings; therefore light, (runs easy) strong and durable.

No. 20, Iron Age, the wheel hoe form of No. 15.....\$5.50

No. 21, With Side Hoe, only.....3 50

NO. 12 IRON AGE WHEEL PLOW AND CULTIVATOR, Price - - - - \$3.25

No. 11 (Same with Plow Only) \$2.25

In the accompanying cut we show a tool of exceeding lightness but of great strength, which is designed to do a greater variety of work than any other tool of the same price. It will accomplish all the work necessary in a small garden,—plowing, furrowing, covering, hoeing raking and cultivating. This tool is emphatically a friend of the laborer or mechanic who can afford only a small amount of money in a garden tool, and whose few moments in a garden must be devoted to "straight-ahead" work.

THE NEW MODEL SEED DRILL, Price- - \$7.50

The New Model Seed Drill contains all the good points of every old drill in the market, with this point in addition, the slide or hole through the slide where all the seeds have to pass, is adjustable, and the slide can be changed to a fraction by the operator, thus admitting exactly the quantity of seed required. The hole is diamond shaped, which is another advantage for rough or irregular shaped seed. **CUT-OFF**—The flow of seed can be instantly stopped by a swinging cut-off, conveniently operated by a cord and ring on handle. This cut-off prevents all loss of seed at an end of rows, and its swinging or gravity form will be found far preferable to one that slides under, as it cannot injure the falling seeds.

No. 22. "Iron Age" Combined Fertilizer Distributor, Hill and Drill Seeder, Price \$17.00

In these days of strong competition in the growing of crops, it becomes necessary for the market gardener to make a study of the most economical use of fertilizers, and to obtain this economy requires such a tool as in accompanying cut, which applies the fertilizer in connection with the seed, just where it will do its greatest good; or by the use of the same tool in its other form, as shown below by applying quick acting fertilizers to growing plants.

Although a tool designed to do so much, it is perfectly simple, light of draught, strong and perfect in quality of the work done by it. These plows are adjustable in

depth and width, which allows the adjustment at the depth at which the fertilizer is sown and allows its distribution in narrow streams at different distances. The plows are immediately followed by the covers which draws the soil over the fertilizer just deposited.

The Fertilizer Distributor is thoroughly reliable in its distribution of fertilizer. It contains a force feed device which prevents stoppage by small lumps.

The Seed Sower Device is practically the same as used on Nos. 6 and 15 Combined Seed Drills. The seed may be sown in rows or dropped in hills at 4, 6, 8, 12 or 24 inches apart. For soft ground we can furnish a wide tire attachment.

No. 23. "Iron Age" Fertilizer Distributor (As a Side Dresser.) Price \$12.50.

Hill and Drill Seeder Attachment, \$4.50.

The side or top dressing of growing plants has become a practice of great importance. It is not merely a matter of the economical distribution of high priced fertilizers, but what is of more consequence, the placing of it just where the rootlets will quickly seize and absorb its chemical constituents.

With the addition of the Hill and Drill Seeder attachment, this tool is identical with the No. 22 Combined Fertilizer Distributor Hill and Drill Seeder shown above.

This tool is operated by working astride the rows of growing plants, and the result accomplished will be most gratifying.

Gem Single Wheel Hoe, \$4.50.

The popular GEM has been so largely used by the market gardeners that it needs no introduction. Being made mostly of steel and malleable iron it is strong, yet light in weight. Sure to please.

No. 60 "IRON AGE" PIVOT WHEEL RIDING CULTIVATOR.

PRICE, \$35 00.

Add for Plows 75c. Fallow Tooth \$1.15.

Ball Bearings—It has wonderful ease of guidance, the pivots being vertical near the wheels, and the ends resting upon hardened steel balls.

Spring Pressure Lock-Down—To prevent the gangs from rising and slipping over hard places, we furnish this Cultivator with a spring pressure lock-down, strong enough to hold it to its work in stiff ground, but weak enough to allow the gangs to rise before damage could occur to them or the standards.

The Lever Gang Adjuster gives the operator immediate control of the width of his gangs. With this adjuster the gangs are always at equal distance from the center. One important feature of our Adjuster is

that the gangs, and necessarily the teeth, are always kept parallel with each other, each tooth presenting its face squarely to the front at all times, and therefore will not throw soil toward the row when expanded, and from the row narrowed up, as is the case when the gangs are pivoted at the front. Especially is this Adjuster valuable where the distance must be changed frequently.

The **Gangs** are of such design as to give great strength—very rigid, so as to instantly follow the directions given by the wheels. For cultivating potatoes and all close grown crops the outside part of gang is removed, together with the standard and tooth.

The **Standards** are made of good steel and can be instantly adjusted in depth of angle of cut, or removed altogether by simply loosening one nut.

Points—The steel points sent out on the Cultivator are $2\frac{1}{2}$ inches in width and 10 inches long, while we have, also, of the same length, points $1\frac{1}{4}$ and $3\frac{1}{2}$ inches in width, meeting a call for those extremes.

The **Wheels** as shown in cut, have flanged tires to prevent slipping on hill sides. They are made of steel and while they may appear light, yet they are very strong and durable.

No. 70 "IRON AGE" Combined Pivot and Fixed Wheel Riding Cultivator. Price \$36.00

Although a combined tool when used in either form, a Pivot or Fixed Wheel Cultivator, it is a thorough success, containing advantages over many tools made expressly as a Fixed or Pivot Wheel tool. The wheels are made of steel, 30 inches high with a broad face tire, $2\frac{1}{2}$ inches wide. They are adjustable in width at any point between 42 inches at the widest and 32 inches at the narrowest. This adjustment allows for the entire cultivation of rows 54 inches apart, and as close as 28 inches or even narrower.

PIVOTED GANG BARS—The gang bars are hinged or pivoted and the cultivating width can be quickly changed by the simple loosening and tightening of two bolts. They are of round bars of steel, with a groove that engages a rib on the tooth holder, thus preventing all danger of turning on the bar, while the eye-bolt firmly clamps the tooth holder to the bar, with no danger of sliding. This combination also gives the facility of changing the position of the teeth on the bar or of increasing or reducing the number.

We call attention to our method of connecting the gangs in front—a connection of parallel links, giving an easy, swinging motion to the gangs, at the same time keeping them square to the front, instead of constantly changing the face of the teeth as occurs by the use of the ordinary single coupling. A **SPRING TOOTH ATTACHMENT** may be quickly and easily applied.

Price per set of 8 (including points)
\$7.00

The Improved Robbins Potato Planter.

PRICE.

With Fertilizer Distributor	\$75.00
Without " "	65.00
Pea and Corn Sower Attachment	5.00
Leveler Attachment95

A machine that is completely and thoroughly successful. Has none of the faults of other planters and does better work than planting by hand.

The opening plow is a double mold plow which throws out on each side a free furrow of loose soil with no packing or wedging to crowd the future growth of the crop.

The fertilizer distributor sows the fertilizer in a broad stream 6 to 8 inches wide, in any quantity desired and same is mixed thoroughly with the soil by the shoe preceeding the potato tube.

The seed is dropped at 12, 14, 15½, 17, 18½ or 20 inches apart. The change from one distance to another can easily be made by changing sprocket wheels. The covering is accomplished by means of a pair of discs which cover the seed with a full free covering.

The seed is neither punctured nor injured in any manner while being deposited in the furrow below, so one may rest assured the seed, after it is planted, is in as good condition as when first placed in the machine.

We refer you to these gentlemen who are using them : C. C. Wilcox, Oswego Falls, N. Y. ; D. R. Overacre, Salina ; Frank Horley, East Onondaga ; T. A. Mitchell, Weedsport, N. Y. ; Mr. Pendergast, Phoenix, N. Y. ; Hubbs Bros., No. Manlius.

No. 1 Iron Age Combined Harrow and Cultivator.

Price	\$5 25
Without Wheel or Lever	4.00

An excellent tool for the cultivation of all small crops. Thoroughly pulverizes the soil without throwing but little dirt.

All believing in level culture should own one of these harrows.

Is truly a 20th Century Tool.

Its great adjustability adapts it for numberless uses and conditions.

In each form it is simple, strong and effective.

BUY YOUR HARDWARE AND WHIPS OF US.

WE SELL THE CELEBRATED BOWKER FERTILIZERS.

MASTICA, FOR GLAZING.

Greenhouses, Sashes, etc., new and old. It is elastic, adhesive and easily applied. It is not affected by dampness, heat or cold.

Every florist has experienced difficulty in obtaining putty [whether ordinary or white lead] for glazing, that is satisfactory for any length of time. The fact is putty is not adapted for greenhouse work. "Mastica," when applied, in a few hours forms a skin or film on the entire mass, hermetically sealing the substance, and preventing the evaporation of the liquids, and remains in a soft, pliable and elastic condition for years. "Mastica" is of great value in going over old houses with a putty bulb or machine on the outside of sash, as it makes it perfectly tight and saves the expense of re-laying the glass.

The use of "Mastica" avoids the necessity of repeatedly reglazing the houses, saving much time and expense. With "Mastica" you can bed in or use outside with machine.

Broken glass can be easily removed and replaced by new without the breakage of other glass, which usually occurs with hard putty. One gallon will cover about 290 running feet [one side].

Prices of Mastica, soft for machine application, $\frac{1}{2}$ gal., 65c., gal., \$1.15. We are Sole Agents for Central New York.

THE STANDARD SPRAY PUMP.

Made
Entirely
of
Brass.

The Only
Pump on the
Market that
is warranted
to the pur-
chaser, and
for five
years

As used with Bucket, Knapsack, Tank or Barrel for Spraying Orchards, Gardens, Vineyards, Whitewashing, Disinfecting Chicken House. Killing Vermin on Stock.

With two solid brass ball valves. No leathers, washers or suckers. No castings to rust. No leaking joints. Nothing to get out of order. Price, \$5.00.

The Electric or Lightning Insect Exterminator.

Price 75 cts.

Effectual, Cheap,

Simple, Practical.

We have sold SLUG SHOT for a great many years, and it is as popular and effective as ever.

SLUG SHOT—Is a light, composite, impalpably fine powder, easily distributed by Duster, Belows, or in water by spraying. It is thoroughly reliable in killing Currant Worms, Potato Bugs, Cabbage Worms, Lice, Slugs, Sow Bugs, etc., and is also strongly impregnated with fungicides.

SULPHO-TOBACCO SOAP—Quickly exterminates all insect life on plants and flowers in and out of doors. Unsurpassed for rose bushes. For a cheap, effective, clean and harmless Insecticide, for Amateur and Professional Growers, this is unexcelled. It also acts as a valuable fertilizer reviving plant life. For domestic purposes it rids the house of cockroaches, and is a superior wash for dogs and all animals. Prevents poultry lice. You cannot afford to be without this popular and well known Insecticide, if you desire to be successful in plant culture. A trial will give highly gratifying results.

3-oz. Cake sufficient for 1½ gallons prepared solution, 10c; mailed postpaid 15c.
8-oz. Cake, sufficient for four gallons prepared solution, 20c; mailed postpaid 28c.

DISPARINE.

G. G. Hitchings of So. Onondaga, says: I consider **DISPARINE** superior to Paris Green for spraying fruit trees. It adheres longer to the foliage and remains in suspension longer than Paris Green. It does not injure the foliage. Consequently the trees require less spraying as the rains do not wash it off so readily. I consider it one of the best sprayers known at this time. I shall use it entirely another season.

Beautify your Lawn by Using Our Seeds and Fertilizers.

Rumsey's Superior Double-Acting Spray Pump.

This represents our new Double Acting Force Pump, which is superior to anything heretofore offered for spraying trees or plants with poisonous mixtures. Being double-acting it throws a continuous stream which, with our "Lilly" nozzle can be diffused over a wide area.

This pump is fitted for hose or iron pipe as ordered. Made in one size only. Price \$6.50.

RUMSEY'S "LILLY" SPRAYING NOZZLE.

PRICE 50 CENTS.

THE BEST SPRAY PUMP ON THE MARKET.

With 3 ft. of $\frac{1}{2}$ in. discharge hose and "Lilly" Nozzle
Can be used for washing windows, carriages, etc.

Price, - - - \$4 00

Price \$3.00—Myers Bucket Brass Spray Pump, with agitator, complete with Hose, Combination, Fine and Coarse Spray and Solid Steam Nozzle.

The Brownie Duster.

For Garden, Vineyard and Small Trees--Particu-
larly Useful for In-Door as well as Out-
Door Work, wherever a Dry Pow-
der is Required.

This machine dispenses with the use of water. Poisons when used dry, are more effective than otherwise and should be distributed in a smoke-like dust, so as to be hardly perceptible on the leaves.

The crank should be turned about 80 revolutions per minute.

Two 16 inch tubes and one bent nozzle furnished with each Duster. Machine weight complete $3\frac{1}{2}$ lbs. One packed in a case.

The grooved brass wheel can be unscrewed and reversed, if worn, or replaced for 5 cts. Reservoir holds $\frac{1}{2}$ lb. Paris Green, 2 oz. Powdered Hellebore, 2 oz. Insect Powder.

The Greatest Seller of the Age

Simplicity Itself

SOMETHING NEW.

A Scientific Discovery.

Absolutely Pure Butter.

—O—

Utica, N. Y., Dec. 26, 1902.

Mr. F. H. Ebeling,

Syracuse, N. Y.

Dear Sir:— In reply to your inquiry regarding the Norcross Churn will say, I know it to be all that is claimed for it. Have used it myself and know whereof I speak. I also demonstrated it before some of the best and most practical butter makers in the U. S., and I never had a failure.

Produces more good butter easier and quicker than any other method I know of.

I will be glad to answer any inquiries from your customers.

Yours very truly,
S. R. BELL, Utica, N. Y.

Daimond Edge Tree Pruner.

PATENTED.

The above Pruner is the most powerful Tree Pruner on the market. The strength and power of this tool is wonderful, and the secret of it is that the nut remains where it is turned, for this reason the blades work inside the LINK NUT TIE, thus there is no friction on the head, or nut of the bolt, and the blade always cuts tight to the edge of curved blade and never becomes loose, as on other similar tools.

High Wheel Imperial.

PRICE, \$4.00

Two Row Deere Corn-Planter.

This plants two rows at a time and is the latest addition to the justly celebrated line of Deere Planters. It is so simple that it is next to impossible for it to get "out of fix," and in the matter of convenience is simply in a class by itself.

The drop works on the "edge selection" principle, taking advantage of the fact that kernels of corn, while varying greatly in size, are comparatively uniform in thickness. This gives the Planter an extremely accurate drop.

The valve mechanism is entirely enclosed within the shank, and is not affected by corn-stalks or other trash. The corn is forced out of the heel in perfect check, regardless of the speed of the team, and there is no clogging of the heel.

It is always ready for either hilling or drilling, no change of the valves being necessary and no change of plates for the distances most used. The foot-drop is always ready for use and is convenient to the foot.

While the front and back frames are extremely rigid, there is a spring connection between the two, allowing the Planter to follow the inequalities of the surface of the ground.

The automatic reel is simple and effective, and so situated that it need never be removed from the Planter, although it may be taken off by simply removing one spring cotter.

An adjustable seat adds greatly to the comfort of the operator.

Price for Corn Planter, Check Rower

and Drill \$45.00

With Fertilizer attached \$55.00

Refer to Skiff Bros., of Salina; Henry Lacy of the Third National Bank, Alderman Frank Matty and Averill & Gregory who are using them.

The American Standard HAND CORN PLANTER,

The Universal Favorite. Quickly adjusted for a light or heavy seeding, and rotates similar to the disc in a Horse Planter. \$1.75

WIARD STEEL AND IRON BEAM PLOWS.

No. 9. THE BEST OF THE WIARD PLOWS.

Landside view of Wiard Forged Steel Beam Plow. All our steel beam flat-land plows now have land side and shoe as shown above. Price \$13.50.

The Wiard Swivel Plow with Automatic Jointer or Coulter.

One of the best plows for hillside or flat land and for cutting roots, or use in rough or stony ground. Price \$13.50.

No. 10-B. Price \$8 to \$10.

For one-horse, plows 4 to 7 inches deep, 6 to 10 inches wide ; weight 77 pounds.

WAIRD SULKY PLOWS. - - - - - Price, \$30.00.

This sulky plow is made in the simplest and strongest manner possible, and by the use of levers is guided precisely like a hand plow; and the greatest advantage derived from its use is in plowing lands so hard and stony as to make hand plowing very difficult. Our method of lifting the plow carries the point backward as the plow is raised, freeing it from obstructions under which it may have caught. The patent flanged wheel gives it a perfectly uniform furrow, and enables the operator to "finish a land" with utmost precision.

The adjustable plates give the exact width of furrow desired, and the sulky is perfectly balanced for either level or inclined fields.

ADRIANCE CORN BINDER. - - - - - Chain Gear.

The Best Up-to-Date Binder on The Market.

Has all the good points of other binders and none of their faults.

Very compact, being only about 5 feet wide, in perfect control of the operator. Handles tangled corn. Discharges bundles clear of the machine, and is everything that a Good Corn Binder should be.

Adriance Buckeye Mowers, Chain Drive or Geared

"NOT IN THE TRUST."

ADRIANCE BUCKEYE MOWERS have been known longer and sold in greater numbers in New York State than other mowers, because they have always embodied the greatest improvements and have combined more good points than any others.

ADRIANCE AND ADRIANCE TRIUMPH REAPERS meet all requirements. The Adriance is the best "all 'round" reaper and great for ensilage corn. The Adriance Triumph is the very lightest draft and the leading light reaper.

ADRIANCE ELEVATOR AND ADRIANCE BINDERS suit any farm or conditions. Have the "Straight Away" binding attachment, gear driven reel, device to easily loosen or tighten aprons and other special valuable features. The most economical in use.

WE SELL ALL of the Adriance Line and CARRY EXTRAS in stock.

The Adriance, Platt & Co. are not in any trust or combination.

Price \$3.00 Each.

Hand and Power Root Cutter.

Has a Capacity of 30 to 100 Bushels per hour. One Bushel per minute has been cut as a test, many times.

Price \$8.00 and Upward.

Automatic Poultry Feeder.

This Automatic Poultry Feeder will reduce the cost of feeding to a minimum, economize in grain, increase the percentage of fertile eggs and health of your flock. The scattering of grain on the ground or in litter is unsatisfactory, as the fowls soon secure all the grain, and are idle until the next feed. The more exercise they get, the better the health of your fowls.

Our Automatic Feeder gives them plenty of exercise, so that they do not overeat.

It will save 50 per cent of time in feeding, and increases the egg-production. The hopper holds sufficient grain for an ordinary flock for 24 hours or more. The Feeder can be filled at night, and is ready for the fowls in the morning. Feeds fast or slow, works automatically, an inside cut-off regulates the discharge. No wood is used except for the platform, therefore there is nothing to get out of order.

The Feeder is suspended about four or five feet from the floor, and set to feed quite freely at first until fowls become accustomed to it. Surround Feeder by a pen about 12 inches or more in height and four or five feet square, which will prevent fowls from scratching litter away from Feeder and will give them additional exercise in getting in and out of pen.

Price \$2.25 each ; 3 for \$6.00 ; Dozen for \$20.00.

CYPHERS NON-MOISTURE INCUBATORS.

The Cyphers Patent. Diaphragm, Non-Moisture, Self-Ventilating and Self-Regulating Incubators

For which we are authorized agents, are guaranteed by the manufacturers as follows:

FIRST:—To require no supplied moisture.

SECOND:—To be self-ventilating.

THIRD:—To be self-regulating.

FOURTH:—To operate with less oil and at less expense than any other make of incubator.

FIFTH:—To be fire-proof, having the best, safest and most costly-built heater attached to an incubator.

SIXTH:—To be in all essentials the simplest and easiest to operate and control, requiring less labor and attention than any other incubator.

SEVENTH:—To be the easiest to set up, hence the most satisfactory incubator for the novice, and to be *strictly automatic in operation*, except the trimming of the wick, filling the lamp and turning the eggs.

EIGHTH:—To produce larger, stronger and healthier chicks and ducklings than any other style or make of incubator.

NINTH:—That where it is run in competition with any incubator of a different make, it shall, in three or more hatches, bring out a larger average percentage of the fertile eggs in good, healthy chicks and ducklings than does its competitor.

TENTH:—*That each and every incubator we send out will do satisfactory work in the hands of the purchaser who will give it a fair trial, or it can be returned to us within 90 days, in good repair, less reasonable wear, and the purchase price will be refunded.*

If you are in search of the best incubator manufactured, the one that will hatch the largest number of the strongest chicks or ducklings, the CYPHERS is that machine. It is used to-day at thirty-two Government Experiment Stations in the United States, Canada, England, Australia and New Zealand. At these stations, which are operated at public expense, the Cyphers Incubators are used by the Professors of Agriculture and Poultry Managers for the purpose of demonstrating to students and poultry classes the scientific principles of artificial incubation.

THE CYPHERS PATENT-DIAPHRAGM, NON-MOISTURE, SELF-VENTILATING AND SELF-REGULATING INCUBATORS have supplanted the old style incubators on the largest broiler plants, duck ranches and egg farms throughout the country, and to-day are used by a majority of America's most successful poultrymen, including prominent fanciers, also by thousands of persons in all walks of life.

IT NOW IS NO IDLE BOAST that the sun never sets on the good work being done by the Cyphers Incubators. They are used in every country on the globe where poultry is produced for market, and are giving uniform satisfaction. Five minutes attention morning and evening positively is all the time required to take proper care of this unequalled hatching machine.

THE STANDARD HATCHER OF THE WORLD.

Although the Cyphers Incubators cost but a little more than cheaply-built, wrongly-constructed, inferior hatching machines, they are worth a great deal more. As a matter of fact they are what every earnest poultry raiser wants—a trustworthy, automatic incubator that with the least practicable attention will hatch the largest possible number of the strongest, largest and most vigorous chicks from a given number of fertile eggs.

THE WHOLE STORY IS SUMMED UP in the Company's final guarantee, which we, as their agents, are authorized to stand back of in every particular, namely, that the Cyphers Incubators will do satisfactory work IN THE HANDS OF EVERY PURCHASER who will give it a fair trial, or it can be returned and the price paid for it will be refunded. Could any proposition be fairer than this? It is equivalent to buying a certainty in an incubator. Our advice to every reader of this catalogue is: Buy the best, then you will know you are right.

CYPHERS UNEQUALLED APARTMENT BROODERS. INDOOR, OUTDOOR AND SECTIONAL.

This Cut Represents the Style A Outdoor Brooder—Front View.

STYLE B INDOOR BROODER—The Cyphers Style B Brooder, standard size, (36x36 inches,) is for indoor use exclusively. It is heated by a Cyphers Safety Brooder Stove, has two apartments for the chicks, one under the hover, the other outside and around the hover; this outside apartment being ten to fifteen degrees cooler than under the hover.

STYLE A OUTDOOR BROODER—Next to its incubator, the Cyphers Company especially prides itself on the three-apartment, Style A Outdoor Brooder it manufactures. They unhesitatingly guarantee this to be the best brooding

device on the market, regardless of price, *for either indoor or outdoor use.* In the Cyphers Outdoor Brooder, Style A, with a total floor space of 36x60 inches, we have not only the double brooding arrangement, consisting of the hover and well-lighted apartment surrounding the same, but for daytime use what amounts to a separate cooler brooder, *or two brooders in one*

CYPHERS SECTIONAL BROODER.—These Sectional Brooders are made in three sizes, two, three and four sections. They are 38 inches wide and 11 inches high. Each section is three feet long. The materials used are the best. There are six heating pipes, substantial and lasting boilers and lamps, a safety expansion tank, adjustable floors and heavy felt hover curtains. They are the most practical and inexpensive hot water brooders ever designed for indoor use in moderate temperatures.

The Cyphers Brooders are offered at low figures, quality of material, workmanship and size considered.
